

FRAUD INVESTIGATION AUDIT REPORT

Generated: 2026-06-14 13:01:26 UTC
Analysis ID: N/A

SYSTEM DECISION: ALLOW_TRANSACTION — STATUS: AUTHORIZED

1. TRANSACTION TELEMETRY PROFILE

Transaction ID	TX_DE6063238F164C4F97A991A94647BE29	Timestamp	2026-06-14T12:56:23Z
Customer ID	CUST_00668	Payment Method	DEBIT_CARD
Device Fingerprint	DEV_00145	IP Address	122.161.59.122
Amount / Currency	267.48 CAD	International	False
Origin Country	IN	Destination Country	IN

2. SPECIALIZED FRAUD AGENTS INDEPENDENT VERDICTS

BEHAVIORAL ENGINE FINDINGS

- score: 0.08

- reasoning: The transaction profile demonstrates strong alignment with legitimate behavioral baselines and directly contradicts the high-risk telemetry patterns documented in the RAG context. Session navigation duration (2.0 minutes) and a clear typing speed flag indicate standard human checkout behavior, contrasting sharply with the sub-one-minute sessions and elevated typing flags characteristic of account takeover attempts in Evidence 1-4. Velocity metrics are stable, recording zero failed transactions over 24 hours against historical fraud baselines of 9-14 failures, while the transaction amount (267.48 CAD) remains within a negligible variance of the 7-day average, ruling out spending spikes. Biometric telemetry shows no anomalies, automation scripts are undetected, and the device risk score is low (10.66). The behavioral signature closely mirrors the verified low-risk historical record (Evidence 5), confirming normal interaction patterns without velocity abuse or synthetic activity.

- confidence: 0.92

NETWORK GRAPH LINKAGE ANALYSIS

Agent stopped due to max iterations.

LEGAL & SANCTIONS COMPLIANCE AUDIT

- risk_score: 0.12

- violations: None

- reasoning: Forensic review confirms domestic routing (origin/destination: IN) with zero exposure to sanctioned jurisdictions referenced in regulatory matrices (RU/SY excluded). Transaction amount (267.48 CAD) and 24-hour frequency (2 transactions) fall well below any statutory structuring/smurfing thresholds, demonstrating no pattern of value fragmentation or reporting evasion. Explicit KYC telemetry confirms PEP status is False. The utilization of CAD for a domestic Indian transaction represents a currency routing anomaly but does not constitute a cross-border standard mismatch or regulatory violation in isolation. All behavioral, device, and session metrics align with legitimate e-commerce activity.

- confidence: 0.96

3. CENTRAL ORCHESTRATOR SUMMARY SYNTHESIS

Assessed Risk Level: LOW | **Consensus Confidence:** 0.94

All active analytical modules demonstrate strong consensus indicating a LOW risk profile. The Anomaly Model explicitly permits the transaction with a low real-time score (22.25) and zero fraud prediction. Behavioral telemetry confirms standard human checkout patterns, stable velocity metrics, and negligible spending variance, directly contradicting known account takeover signatures. Compliance analysis verifies domestic routing, zero regulatory violations, and sub-threshold structuring activity, noting only a benign currency routing anomaly. The Network Graph agent returned no data due to iteration limits, but this absence does not detract from the robust alignment across the remaining modules. Consequently, the transaction is deemed legitimate with high confidence.
